

JANUARY TIP SAVINGS: \$120-\$150/YR
Avoided Emissions of CO₂: Up to 320 lbs./YR

\$USTAINABILITY \$AVINGS TIP

COMPOSTING: BREAKING IT DOWN TO THE BASICS *Easy steps to turn green waste into mulch*

With the new year comes an opportunity to transform your garden or lawn into something new and attractive. Placing organic mulches or compost around your plants is an easy and cost-effective way to ensure plants stay healthy, while also keeping weeds in check. Making your own organic mulch is as easy as setting up a compost bin in your backyard. Applying compost mulch to plants once or twice a year can reduce plant water needs by as much as 30%, while also making safe use of waste that would otherwise end up in a landfill.

The composting process creates more efficient conditions for organic waste to decompose, producing nutrient-rich mulch. Kitchen scraps, yard clippings, and other organic materials are most commonly used. Here are simple tips to follow:

**Attend our
Composting
Class on Jan. 26.**

COMPOSTING TIPS

1. Pick a spot for your compost pile that is convenient for you to access and close to a water source.
2. Layer carbon-rich materials (browns) to nitrogen-rich materials (greens). Layering helps to speed up the process and reduce odors. Here are examples:
Browns- Sawdust, chipped branches, leaves, shredded paper, used paper towels and straw. If you have elms, ash, or pecan trees, you likely have a lot of leaves you can bag up and use thru the year.
Greens - Kitchen fruit/vegetable scraps, coffee grounds, grass clippings, weed or leafy trimmings.
3. To aid the decomposition process, the pile needs oxygen and moisture. Turn the pile occasionally to aerate, and add water or any cooking liquids (pasta water, etc.) to keep the materials moist.
4. You know it is done when it smells earthy and you cannot identify the original materials.

CHECKLIST FOR SAVINGS

- Jan. 26: Take a Composting Class** taught by Master Gardeners from 1-3 p.m. at Mesa Library Red Mountain Branch, 635 N. Power Road. Learn more, <https://bit.ly/2Qr1MbP>.
- Mesa's Backyard Composting Program** provides compost containers (made from recycled trash bins) for a \$5.00 deposit. They also offer **Steps to Successful Composting** with tips. Visit www.mesarecycles.org for more information.
- Find **Composting in the Desert** from the UofA Cooperative Extension, <https://bit.ly/1SxVZP8>.
