

# Why is this project important?

- ✓ Builds essential infrastructure to maximize an existing water exchange agreement with the Gila River Indian Community (GRIC)
- ✓ Helps **balance Mesa's water resource portfolio** – a balanced water portfolio includes a variety of water supplies for Mesa to draw from to meet demand in delivering water to Mesa residents and businesses now and into the future.
- ✓ **Maximize storage credits** – Mesa gets credit for water they store – to be able to access other resources, or save for the future.

Typical traffic control during construction

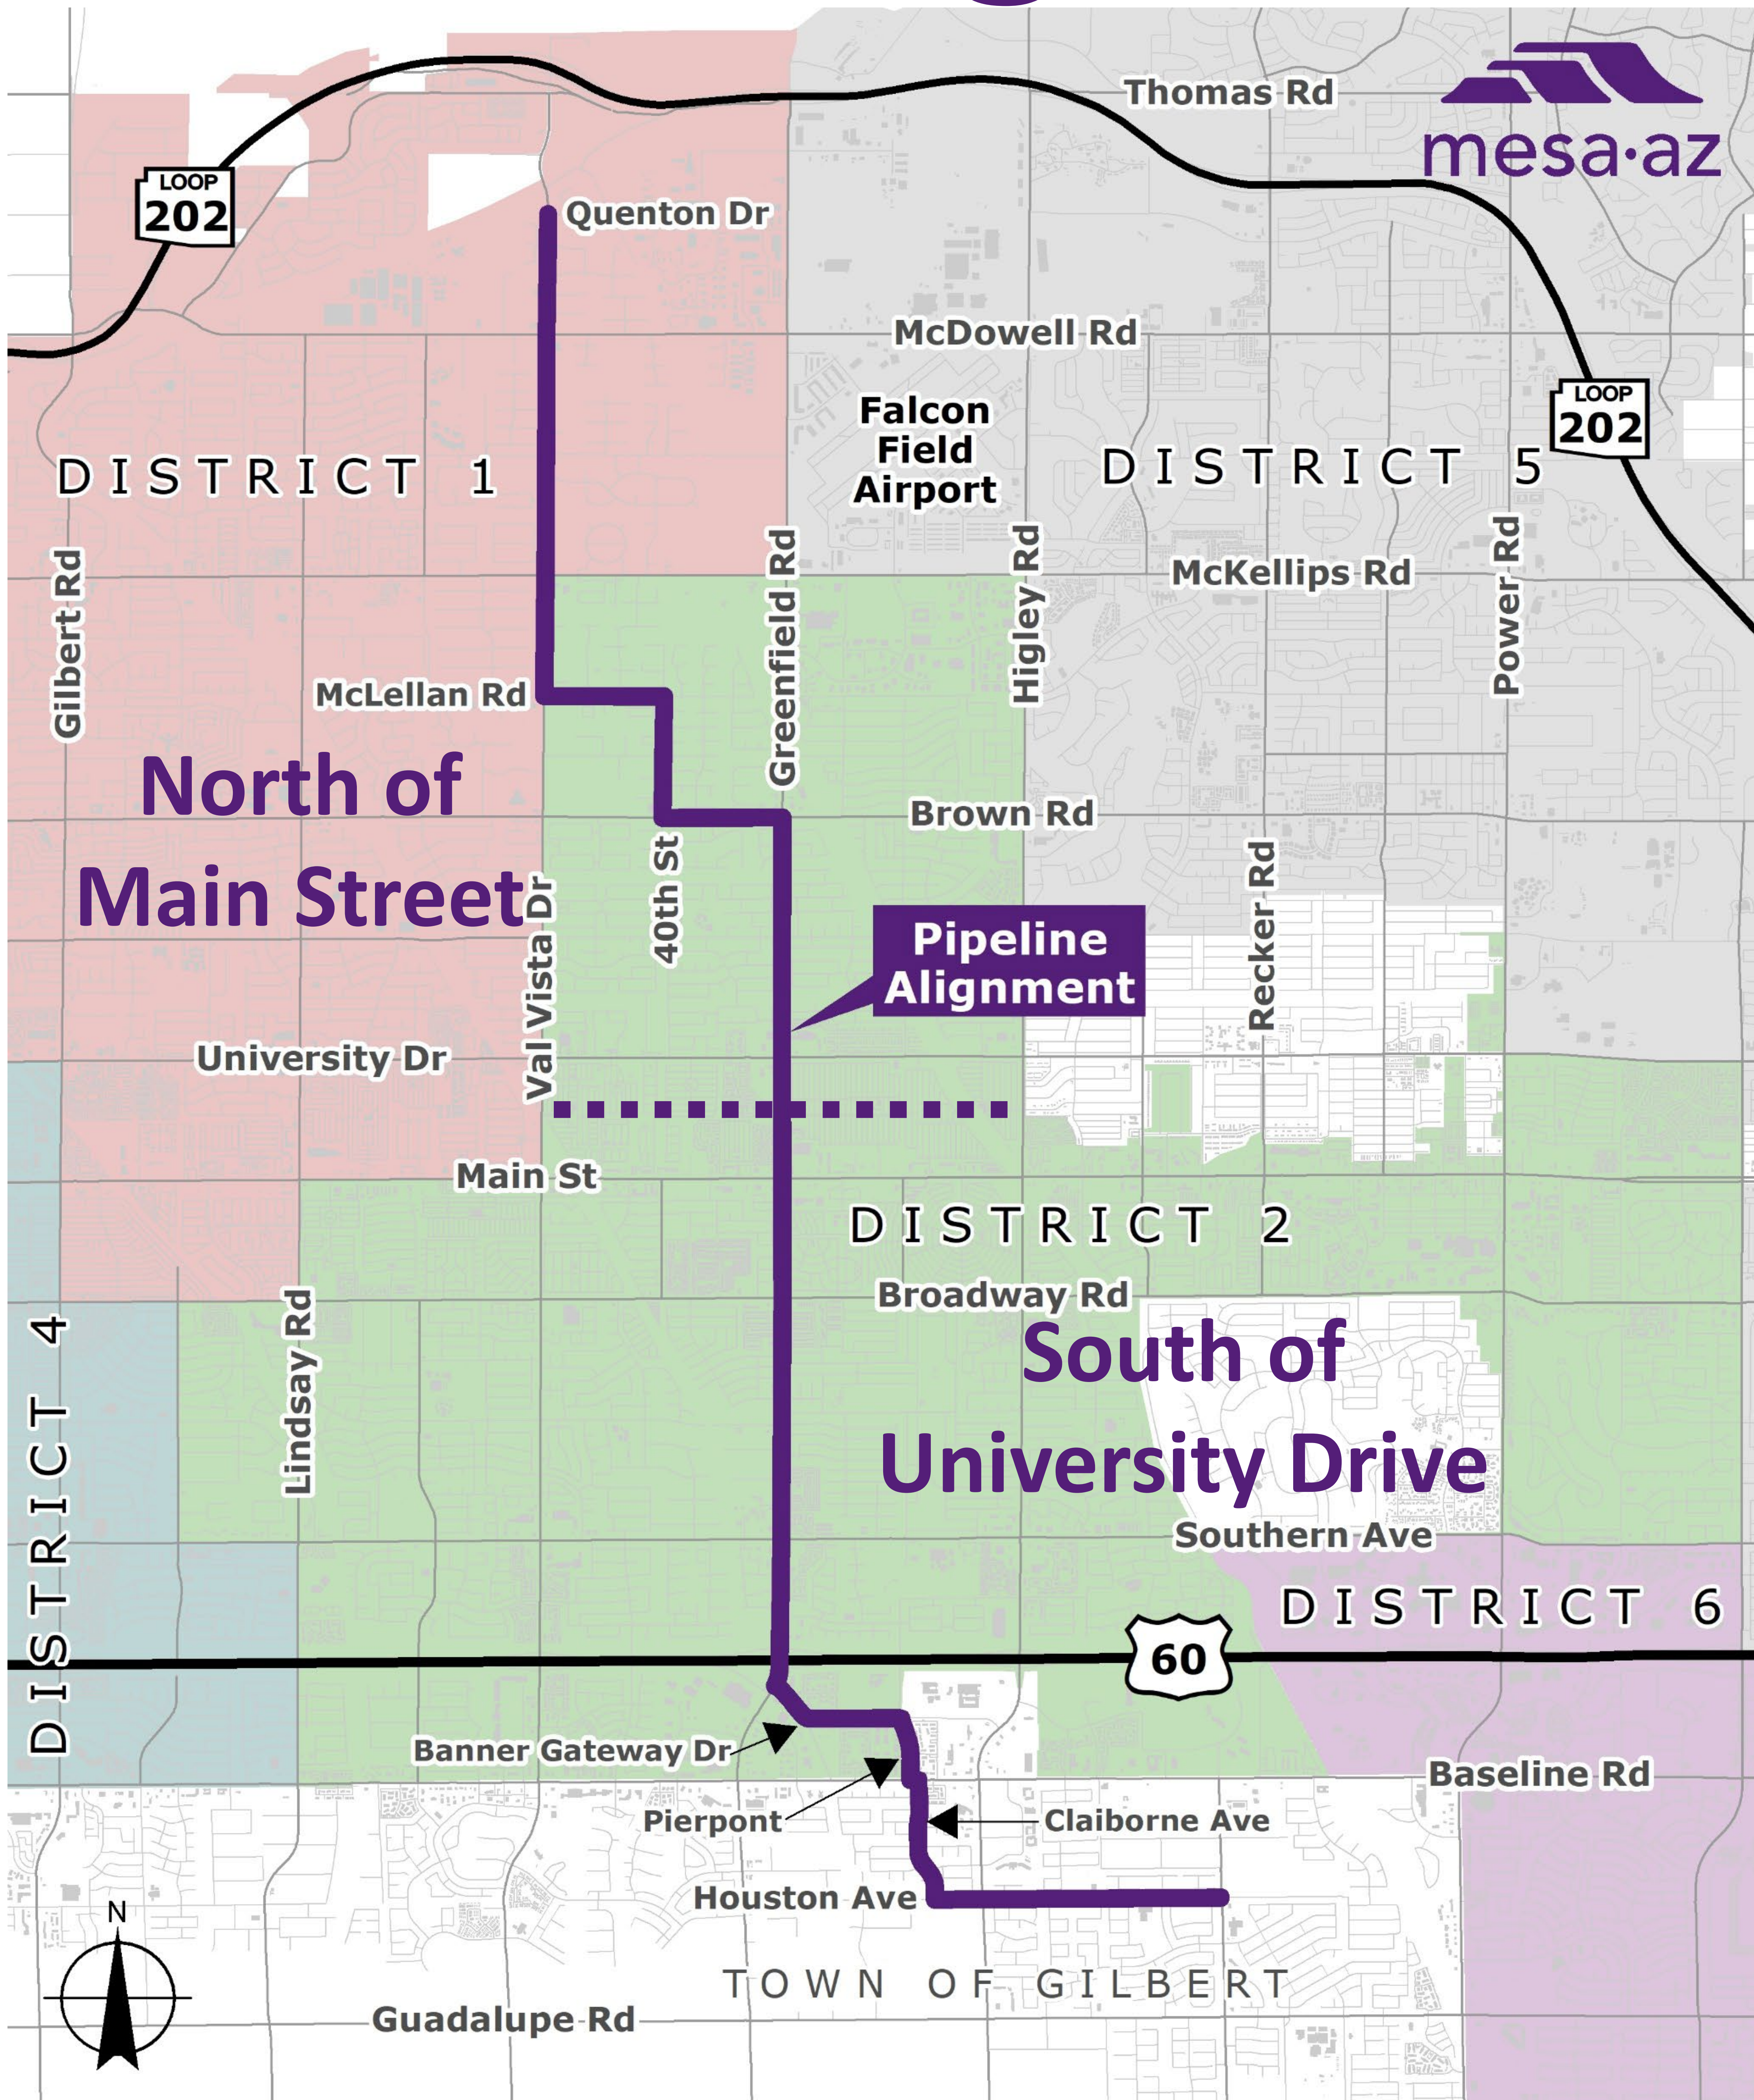

Pipe staged in roadway and excavation of trench
