

WASTEWATER UTILITY

Rates for residential wastewater service are comprised of two components: Service Charge with a flat monthly rate, and Usage Charge based on wastewater demand volume. Wastewater volume is calculated for each customer based on 90% of the average monthly water use for the three lowest water usage months from December through March (also known as the “winter water monthly average”). This approximates indoor household usage and the resulting demand on the wastewater system. A City-wide winter water monthly average is used for new customers until an individual customer average can be determined.

Residential Rates

Across Residential customer classes, wastewater rates will increase 3.5% for the service charge and the usage charge.

Non-Residential Rates

Across Non-Residential customer classes, wastewater rates will increase 4% for the service charge and the usage charge.
